

ARK-503 — Status Declaration

```
experiment_id:    ARK-503
title:            Independent adversarial review of the enterprise-adapter
boundary
status:          NOT-EXECUTED
reason:          requires an independent human reviewer; not self-executable
scored_contribution: 0 case records, 0 PASS, 0 FAIL (until a signed rubric exists)
package_state:    READY-FOR-HANDOFF
verifier_self_test: PASS (independent_verifier.py detects tampering; exit 1 on
tamper, 0 on clean)
blocks_on:        signed RUBRIC.md from an engineer with no stake in RF Inc.
governing_rule:   when narrative and machine record disagree, the machine
record governs
```

This experiment is intentionally **not** marked PASS by the builder. A machine cannot certify its own independence. ARK-503 stays `NOT-EXECUTED` in the Remnant Fieldworks corpus until a qualified independent reviewer completes and signs `RUBRIC.md`. Only then — and only with claims kept narrower than the evidence — may ARK-503 contribute a scored result.
